SUMMARY

AI Engineer with 2+ years building AI-augmented engineering workflows and agentic tooling in Java, Spring Boot and Python: a 7-tool MCP AI service and internal platforms other product teams use, ownership of prompt engineering and quality assurance for AI-generated output, and end-to-end delivery that has saved an estimated 80 person-days of manual work.

TECHNICAL SKILLS

Languages: Java, Python, Rust, C++, JavaScript, Bash
AI & AI-Augmented Engineering: Generative AI Tools, Agentic Coding (GitHub Copilot, Copilot CLI), MCP, Prompt Engineering, Context Engineering, Human-AI Workflows, AI Output Quality Assurance, LLM Gateway, AI Agents, Multi-Agent Systems, RAG, LangChain, LangGraph, Model Fine-Tuning, Cost Optimization
Architecture & Backend: Spring Boot, REST APIs, Microservices, Distributed Systems, System Design, React, Angular, Apache Kafka, Node.js, Elasticsearch, Liferay, JWT
Cloud, Data & DevOps: CI/CD, Docker, Kubernetes, Azure, Google Cloud, AWS, Azure DevOps, Databricks, Git, Helm, Terraform, Vault, Datadog, GNU/Linux
Quality & Testing: Automated Code Review, SonarQube, Pact contract testing, Cucumber, Gherkin, black-box testing, Mock Server, test automation

EXPERIENCE

Associate Software Platform Engineer II (AI Engineer) — MetLife, Corporate Technology Dec 2025 – Present

- Lead the migration of 1 vendor-built agent platform to GitHub Copilot and the MetLife stack, and build the internal MCP server platform other product teams run their agents on.
- Build a local SonarQube MCP agent plus a 7-tool MCP AI service for Azure DevOps that detects failing pipelines and proposes code fixes inside the IDE, keeping automated quality review in the developer loop.
- Train the full MGCC CorpTech organization on prompt engineering and deliver 3 enablement topics spanning AI and prompting, file analytics, and correction-agent workflows.
- Build a multi-agent analytics service grounded in an Adobe Databricks business context, wiring a conversational frontend to natural-language analytics over 1 production dataset.
- Automate Oracle HCM pre-run versus post-run diff analysis with Comparator, saving an estimated 80 person-days and cutting quarterly comparisons from sprints to hours.

Software Developer Intern — Vanderlande Aug 2024 – Mar 2025

- Implemented Pact consumer/provider contract tests and Cucumber black-box suites for Kafka and REST microservices across 3 warehouse ITMs, validated on Oracle and PostgreSQL before every merge.
- Delivered 4 WPLAT tickets across Java and Spring Boot REST endpoints, a quality review of Kafka event documentation (OpenAPI, AsyncAPI), and a performance analysis with the platform team.
- Evaluated 4 IO-emulation designs for the loop sorter, rejected the full IO-layer redesign as too slow to land, and shipped a thinner C++ and Rust PROFINET translation layer that removed a dedicated industrial PC and reached 90% sorter efficiency.

Software Developer Intern — RigBetel Labs Dec 2023 – Jul 2024

- Built RoboNet, a Rust and Python robot networking suite (hotspot daemon, logs web server, FastAPI config API) now running on every RigBetel Labs robot across 2 compute platforms.
- Enabled internet teleoperation of ROS2 robots through 1 Google Cloud-hosted Zenoh router, replacing LAN-only control and bridging pub/sub across NAT.

Freelance Robotics Consultant — Vector Robotics Feb 2025

- Delivered 1 on-device depth perception stack in Rust and OpenCV on NVIDIA Jetson for a robotics client, published through a ROS2 Jazzy package and demoed live at IIT Bombay E-Summit.

EDUCATION

Bachelor of Engineering, Computer Engineering — Pune University 2025
